

## CLAIMS

What is claimed is:

1-13. (CANCELLED)

14. (NEW) An unclogging apparatus, comprising:

a plunging means;

a first tube means, in communication with said plunging means; and

a second tube means positioned on said first tube means, adjacent to where said first tube means is in communication with said plunging means.

15. (NEW) The unclogging apparatus of claim 14, wherein second tube means has a valve flap that selectively opens.

16. (NEW) The unclogging apparatus of claim 15, wherein said valve flap opens when under pressure.

17. (NEW) The unclogging apparatus of claim 15, wherein said second tube means is configured to push out debris through said valve flap.

18. (NEW) The unclogging apparatus of claim 14, wherein said first tube means is configured to adjust to the diameter of an AC evaporator drain line.

19. (NEW) An unclogging method, comprising:

inserting a first end of a first tube means into an AC unit's drain line;

squeezing a plunging means, the plunging means attached to a second end of the first tube means;

opening a valve flap, the valve flap attached to a second tube means, the second tube means positioned on the first tube means near the second end of the first tube means.
